

PERSONAL CONTENT CALENDAR

Joshua · audio scripts · November 2026

JOSHUA OBAJE · FOUNDER & CTO, EAGLESCROFT

Recording-ready voiceovers for all 16 videos in `2026-11-scripts.md`. Plain-text copies for AI voice tools are in `audio/` (one `.txt` per video).

Marks: `…` = short pause (about 0.3s) · `—` = quick beat (about 0.15s) · **bold** = stress (these are also the words that pop up on screen) · *italics* = quoted speech, so change your tone.

Every video:
- Speak at about **3 words a second**. Tool drops run a little faster, stories a little slower.
- Leave **about 1.5s of music** after the last word for the end card.
- Say the comment keyword slightly **slower and louder**.
- **AI voice:** paste the text from `audio/`, keep the `…` marks, and turn on the AI-content label when posting.
- **Your own voice:** record in a quiet room or a wardrobe full of clothes, with the phone about 15 cm away.

Week 1

V01 · Mon 2 Nov · "3 free AI tools that feel illegal to know"

Tool drop · 89 words · about 30–33s · energetic, letting a friend in on a secret

> Anyone with a laptop…
>
> here are **three free AI tools** that feel *illegal* to know.
>
> The last one's my favourite.
>
> First — **NotebookLM**, by Google.
>
> Upload your notes or a PDF… and it turns them into a **podcast**.
>
> Second — **Gamma**.
>
> Type one sentence… and it builds a full, designed slide deck — in about a minute.
>
> And finally — **Napkin**.
>
> Paste any paragraph… and it turns it into clean **diagrams** you can drop into a report.
>
> Want the links?
>
> Comment **TOOLS** — and check your DMs.
>
> Follow for one AI tool every week.

Say it: NotebookLM = "Notebook L-M" · Gamma = *GAM-uh*. Hit "Anyone with a laptop" fast, then slow down on "three free AI tools".

V02 · Wed 4 Nov · "Voice note → professional invoice in 60 seconds"

How-to · 135 words · about 50–53s · calm and helpful, like showing a friend on your phone

This is how you turn a **voice note** into a **professional invoice**… in under a minute.

No templates. No typing.

Let me show you.

Open ChatGPT, Gemini or Claude on your phone — and tap the **microphone**.

Now talk like you're telling a friend:

"Invoice for Ade Stores. Ten bags of rice at seventy-two thousand naira each. Delivery, five thousand. Due Friday."

Then add one line:

"Turn this into a professional invoice with my business name, an invoice number, today's date, a table and the total."

Check every number. AI can add wrongly… so confirm the total yourself.

Copy it into Google Docs, add your logo, download it as a **PDF**… and send it on WhatsApp.

Comment **INVOICE** — and I'll send you the exact prompt.

And send this to someone who still writes invoices by hand.

Say it: read the italic lines faster and more casually, as if you're dictating. Slow down on "Check every number". Naira = *NYE-rah*.

V03 · Fri 6 Nov · "Nvidia: 30 days from going out of business"

Origin story · 134 words · about 48–51s · storyteller: low, building tension, lifting at the twist

Before Nvidia became a **five-trillion-dollar** company…

it was **thirty days** from going out of business.

In 1993, three engineers met at a Denny's restaurant in California…

and decided to build chips for 3D graphics.

Jensen Huang became the CEO.

Their first chip — **flopped**.

By 1997, Nvidia was down to about forty people… and roughly **one month** of cash.

So they bet everything on one more chip — the RIVA 128.

It sold about **a million units** in four months.

The company survived.

Then came the twist.

Graphics chips do **thousands** of small calculations at once.

That's exactly what **AI** needs.

Today, most of the world's AI runs on Nvidia chips.

Sometimes the thing you build for one market… wins a much bigger one.

Which tech company should I cover next?

Tell me in the comments.

Say it: Nvidia = *en-VID-ee-uh* · Jensen Huang = *JEN-sun HWAHNG* · RIVA 128 = *REE-vuh one-twenty-eight*. Land "flopped" hard and let "The company survived" breathe.
Check: Nvidia is still above $5 trillion on recording day. If not, say "a multi-trillion-dollar company".

V04 · Sun 8 Nov · "Why ChatGPT confidently makes things up"

AI explained · 114 words · about 40–43s · news anchor: clear, steady, a bit serious

> ChatGPT just **lied** to you…
>
> and it didn't even know it.
>
> AI chatbots don't look facts up like Google does.
>
> They **predict** the next most likely word… one word at a time… from patterns in billions of pages.
>
> Most of the time, the most likely answer is the right one.
>
> But when it doesn't know… the most likely-*sounding* answer can be **completely made up**.
>
> So here's the rule.
>
> Use AI to draft, explain and brainstorm.
>
> But anything with a **number**, a **name**, a **date** or a **quote** — check it yourself.
>
> Or ask for sources… and open them.
>
> Send this to someone who believes everything ChatGPT says.
>
> And follow for AI, explained in plain English.

Say it: open like breaking news. Give "number, name, date, quote" one beat each.

Week 2

V05 · Mon 9 Nov · "3 free research sites every student needs"

Tool drop · 78 words · about 27–29s · upbeat, like a big brother or sister sharing a hack

> **Students.**
>
> Three free research websites your lecturers wish you knew.
>
> The second one saves **hours**.
>
> First — **Consensus**.
>
> Ask a question in plain English… and it answers from real published papers — with the sources.
>
> Second — **Semantic Scholar**.
>
> Millions of papers, free… with a one-line summary of each.
>
> And — **Zotero**.
>
> Save any source in one click… and it formats your references in APA or Harvard — for you.
>
> Comment **STUDY** for all three links.
>
> And always read the papers you cite.

Say it: Zotero = *zoh-TAIR-oh*. "Students." is one word, then a full stop and a beat. Say the last line warmly, as genuine advice.

V06 · Wed 11 Nov · "Make WhatsApp reply while you sleep (free)"

How-to · 122 words · about 46–49s · practical, a smart friend who runs a shop

> Your customers message at **midnight**… and you reply at nine a.m.
>
> Here's how to make WhatsApp answer for you — **free** — in five minutes.
>
> Download **WhatsApp Business**.
>
> Same WhatsApp… made for selling.
>
> Go to Settings, then Business tools.
>
> Turn on the **Greeting message**.
>
> It welcomes every new customer — automatically.
>
> Turn on the **Away message**… and set it to outside business hours.
>
> *"Thanks for your message! We'll reply by nine a.m. Meanwhile, see our catalogue."*
>
> Add your **Catalogue**: photos, prices, descriptions.
>
> Customers can browse without asking… *"how much?"*
>
> Then **Quick replies**.
>
> Save your top answers, type slash price… and the whole price list appears.
>
> Comment **WHATSAPP** — and I'll send you five ready-made messages to copy.
>
> Send this to a business owner who needs it.

Say it: play *"how much?"* as a knowing joke, because every seller hears it all day. "Slash price" = the `/price` shortcut; say it clearly.

V07 · Fri 13 Nov · "M-Pesa: the loan app customers turned into a bank"

Origin story · 123 words · about 46–49s · storyteller: warm, proud of an African success

> Africa's most famous mobile money service… started as a way to repay **small loans**.
>
> Then customers did something **nobody planned**.
>
> Kenya. 2005.
>
> Vodafone and Safaricom, with funding from the UK government, tested a simple idea:
>
> let people repay microloans… by **text**.
>
> But during the pilot, people started using it for something else.
>
> Sending money to family.
>
> Paying each other.
>
> Topping up airtime.
>
> Instead of forcing the original plan… the team **followed the customers**.
>
> In March 2007, M-Pesa launched with one main promise — **send money**.
>
> M… for mobile.
>
> Pesa… Swahili for money.
>
> No bank account needed — just a phone, and an agent around the corner.
>
> Watch what your customers **actually do**… not what you planned.
>
> Which African startup should I cover next?
>
> Comment below.

Say it: M-Pesa = *em-PEH-sah* · Safaricom = *sa-FAH-ree-com*. Give the three uses ("Sending money… Paying… Topping up…") a rhythm, one beat each.

V08 · Sun 15 Nov · "What an AI agent actually is"

AI explained · 117 words · about 43–45s · clear explainer, slightly playful

> Everyone's saying *"AI agents."*
>
> Here's what it actually means — in thirty seconds.
>
> A chatbot **answers**.
>
> An agent **acts**.
>
> Ask a chatbot for flight prices… and it tells you.
>
> Ask an agent… and it opens the website, compares the options, fills in the form —
>
> and asks: *"Shall I book?"*
>
> Agents use **tools**: a browser, your email, your calendar, a spreadsheet.
>
> They break a big task into steps… and work through them.
>
> They're powerful — and they make **mistakes**.
>
> So the golden rule:
>
> let the agent **prepare**… and you **approve**.
>
> Never hand over money or passwords without a human check.
>
> Want to see one working, step by step?
>
> Comment **AGENT** — and if enough of you do… that's my next video.

Say it: "answers / acts" is the whole idea, so leave a clear pause between the two lines. Speed up through the list of agent actions, then stop on *"Shall I book?"*

Week 3

V09 · Mon 16 Nov · "3 free tools that replace paid design software"

Tool drop · 80 words · about 29–31s · confident, money-saving energy

> **Small business owners.**
>
> Stop paying for design software.
>
> These three **free** tools do the job.
>
> The last one runs on your own laptop.
>
> First — **Photopea**.
>
> A free photo editor in your browser.
>
> It even opens Photoshop files. No download.
>
> Second — **remove.bg**.
>
> It removes the background from any product photo… in seconds.
>
> And — **Upscayl**.
>
> It turns a blurry, low-quality image… into a **sharp** one.
>
> Free, open source — right on your computer.
>
> Comment **DESIGN** for the links.
>
> Follow for more free tools.

Say it: Photopea = *FOH-toh-pee-ah* · remove.bg = "remove dot B G" · Upscayl = "upscale".

V10 · Wed 18 Nov · "Make AI write like you, not like a robot"

How-to · 124 words · about 45–47s · friendly coach

> If your AI writing sounds like a **robot**…
>
> it's because you never showed it how *you* write.
>
> Fix it — in one minute.
>
> Step one.
>
> Copy three things you've written: a post, an email… and a message to a customer.
>
> Step two.
>
> Paste them into ChatGPT, Claude or Gemini with this:
>
> *"Study my writing. Describe my tone, sentence length, favourite words… and words I never use."*
>
> Step three.
>
> **Save** that description.
>
> In ChatGPT, it's Custom instructions. In Claude, a Project. In Gemini, a Gem.
>
> Now every caption and email starts in **your voice**.
>
> Step four.
>
> Still write the **first line** yourself.
>
> That's where people decide to keep reading.
>
> Comment **VOICE** — and I'll send you the exact prompt.
>
> Follow for AI that actually saves you time.

Say it: say "robot" a little flat and mechanical for fun, then go back to warm.

V11 · Fri 20 Nov · "Paystack: fixing Nigeria's checkout problem"

Origin story · 126 words · about 46–48s · storyteller: proud, Lagos energy

In 2015, a Nigerian developer was tired of **one problem**.

Five years later… Stripe bought his company for over **two hundred million dollars**.

Getting paid online in Nigeria was **painful**.

Payments failed. Checkout forms were long.

And many tools weren't built for Nigerian cards.

Shola Akinlade co-founded **Paystack** in Lagos with one idea:

make online payments in Nigeria… **just work**.

In 2016, it became the first Nigerian company accepted into **Y Combinator** —

Silicon Valley's most famous startup programme.

Businesses signed up fast… because developers could plug it in easily.

Stripe invested in 2018.

And in October 2020… it bought Paystack — reported at over two hundred million dollars.

Solve a **boring** problem everyone has… and solve it **properly**.

Which Nigerian startup should be next?

Tell me below.

Say it: Shola Akinlade = *SHOH-lah ah-kin-LAH-deh*. Keep "reported at" in; it's the accurate wording. The last line is the lesson, so slow down.

V12 · Sun 22 Nov · "Will AI take your job? The honest numbers"

AI explained · 107 words · about 39–41s · calm, reassuring, honest

Will AI take your job?

Here's the honest answer… with **real numbers**.

The World Economic Forum surveyed over a thousand of the world's biggest employers.

Their forecast for 2030:

about **ninety-two million** jobs lost…

but about **a hundred and seventy million** created.

That's a net gain of **seventy-eight million**.

The catch?

They're **not the same jobs**.

The jobs shrinking fastest are repetitive: data entry, cashiers, basic admin.

The growing ones need people who can use technology… and think clearly.

So AI probably won't take your job.

But someone who uses AI **well**… might.

Comment your **job title** — and I'll tell you one AI skill to learn first.

Say it: "The catch?" is a question with a half-second pause before the answer. Land "might" quietly, not dramatically.

Week 4

V13 · Mon 23 Nov · "3 free tools that work like a personal assistant"

Tool drop · 78 words · about 27–28s · brisk, organised

> Running a business **alone**?
>
> These three free tools work like a **personal assistant**.
>
> Number three ends the back-and-forth on WhatsApp.
>
> First — **Tally**.
>
> Build order forms, booking forms and surveys in minutes.
>
> Unlimited forms… free.
>
> Second — **Perplexity**.
>
> Ask any business question… and get an answer with the sources linked.
>
> And — **Cal.com**.
>
> Share one link… and clients book a time that works for both of you.
>
> No more… *"what time is good?"*
>
> Comment **ADMIN** for the links.
>
> Follow for more.

Say it: Cal.com = "cal dot com". Say *"what time is good?"* in a tired, been-there voice.

V14 · Wed 25 Nov · "One idea → a week of content in 10 minutes"

How-to · 128 words · about 47–49s · creator-to-creator, efficient

> Posting every day… doesn't mean **writing** every day.
>
> Here's how I turn **one idea** into a week of content — in ten minutes.
>
> Step one.
>
> Write your idea in one messy paragraph… or just voice-note it.
>
> Step two.
>
> Ask AI:
>
> *"Turn this into seven posts: a story, a how-to, a myth versus truth, a checklist, a question for my audience, a quote… and a behind-the-scenes. Keep my voice."*
>
> Step three.
>
> Ask for **three hooks** for each post… and pick the best one yourself.
>
> Step four.
>
> Turn the how-to into a carousel in Canva or Gamma.
>
> Step five.
>
> Schedule everything on Sunday night.
>
> **Done** for the week.
>
> Just edit each one — AI drafts… *you* bring it to life.
>
> Comment **WEEK** — and I'll send you the full prompt.
>
> Follow for more.

Say it: the seven formats in step two are a list, so keep them crisp and even. "Done for the week" is the payoff; smile while you say it.

V15 · Fri 27 Nov · "ChatGPT turns 4: the 'test' that started the AI race"

Origin story · 125 words · about 45–47s · storyteller: nostalgic, then big

> On Monday… ChatGPT turns **four**.
>
> But when it launched, even the people who built it didn't expect what happened next.
>
> November thirtieth, 2022.
>
> OpenAI released ChatGPT as a free **research preview**.
>
> Basically… a **test** — to see how people would use it.
>
> Five days later, it had **a million** users.
>
> Within about two months, an estimated **hundred million** people were using it every month —
>
> faster than TikTok or Instagram ever grew.
>
> Students used it for homework.
>
> Developers, for code.
>
> Businesses, for emails.
>
> Within months… every major tech company changed its plans.
>
> A product launched as a test…
>
> started the **AI race** we're all living in now.
>
> So tell me — what was the **first thing** you ever asked ChatGPT?
>
> Comment below.
>
> And follow for more tech stories.

Say it: build the numbers ("a million" → "a hundred million") so the second one is bigger and louder. Keep "an estimated"; it's the accurate wording.

V16 · Sun 29 Nov · "The AI scam that copies your family's voice"

AI explained · 124 words · about 45–47s · serious and protective, with urgency but no fearmongering

> If your *"brother"* calls crying… and asks you to send money **now** —
>
> **stop**.
>
> It might not be him.
>
> Scammers can now **copy a voice** from a short clip — like a video your family posted online.
>
> They call… sound exactly like someone you love… and create **panic**.
>
> An accident.
>
> An arrest.
>
> A *"lost phone."*
>
> Panic… is the weapon.
>
> So protect your family today.
>
> One: agree on a family **code word** — something never posted online.
>
> If the caller can't say it… hang up.
>
> Two: hang up — and **call them back** on the number you already have.
>
> Three: never send money on a call that **rushes** you.
>
> Real emergencies can wait two minutes.
>
> Send this to your **family group chat** — right now.
>
> It could save someone's money.

Say it: after "stop", give a full one-second pause. Read the three steps steadily and slowly, because people will screenshot them.
